

VELOP PLUG-IN
Disclaimers and Legal Information

Specifications are subject to change without notice. This product connects to an active Velop System, which must be purchased separately, to expand coverage of the home network. An active, customer-purchased Internet Service Provider broadband account is also required. Some devices may require additional wireless adapters or an Ethernet cable to connect.

Maximum Performance derived from IEEE Standard 802.11 specifications. Actual performance may vary, including lower wireless network capacity, data throughput rate, speed, range and coverage. Performance depends upon many factors, conditions and variables, including building materials and construction, volume of network traffic, mix of wireless products used, interference and other adverse conditions. In order to achieve the best performance, this product must be used with compatible AC1300 wireless devices. The standard transmission rates —867 Mbps (for 5 GHz radio), 400 Mbps (for 2.4 GHz)—are the physical data rates. Actual data throughput will be lower and may depend on the mix of wireless products used and external factors.

May require a software/firmware update available for download at linksys.com/support.

The AC1300 node in the wireless system provides a range of up to 1,500 square feet or the approximate size of a 1-2 Bedroom house or apartment. Range can vary with the number and placement of nodes in the system. Range specifications are based on performance test results under normal use case conditions. Actual ranges will vary depending on wireless interference, physical obstructions, operating environments and building material. Wireless coverage claims are used only as reference and are not guaranteed, as each wireless network is unique.

Coverage statements regarding house or apartment size are provided as a guide only. Each node in the wireless system provides additional coverage. Additional nodes (available for purchase separately) may be required for especially large houses/apartments or buildings with thick or dense walls. Coverage of all homes cannot be guaranteed due to variations in size, layout, building materials and the level of wireless interference present.
